Biochemical Oxygen Demand (BOD, also called Biological Oxygen Demand) is the amount of dissolved oxygen needed (i.e. demanded) by aerobic biological organisms to break down organic material present in a given water sample at certain temperature over a specific time period. The BOD value is most commonly expressed in milligrams of oxygen consumed per litre of sample during 5 days of incubation ...

Guidance for FDA Reviewers and Sponsors

The purpose of this modification is to extend the response deadline to January 18, 2019. The U.S. Department of Energy (DOE) Office of Energy Efficiency and Renewable Energy (EERE) Bioenergy Technologies Office (BETO) is requesting information on research opportunities related to outdoor algae research, biomass characteristics and feedstock performance, and renewable energy from urban and ...

Financial Opportunities: Funding Opportunity Exchange

Downstream processing refers to the recovery and purification of biosynthetic products, particularly pharmaceuticals, from natural sources such as animal or plant tissue or fermentation broth, including the recycling of salvageable components and the proper treatment and disposal of waste. It is an essential step in the manufacture of pharmaceuticals such as antibiotics, hormones (e.g. insulin ...

Nutrient Recovery by Biogas Digestate Processing

The use of *Bifidobacterium* spp. and/or *Lactobacillus acidophilus* in fermented or culture-containing milks became popular by the end of the 1970s as a result of the tremendous increase in knowledge encompassing the taxonomy and ecology of bifidobacteria. Their popularity has further increased owing to their reduced acidification during post-processing storage and their relatively high yield of ...
