User Interface Design Designing effective interfaces for software systems Importance of user interface 2  
System users often judge a system by its interface rather than its functionality  
A poorly designed interface can cause a user to make catastrophic errors  
Poor user interface design is the reason why so many software systems

Recoverability The interface should include mechanisms to allow users to recover from errors. User guidance The interface should provide meaningful feedback when errors occur and provide context-sensitive user help facilities. User diversity The interface should provide appropriate interaction facilities for different types of system user.

Common interfaces reduce complexity  
System architecture drives the types of interfaces to be utilized in the design process  
Clear interface identification and definition reduces risk  
Most of the problems in systems are at the interfaces.  
Verification of all interfaces is critical for ensuring compatibility and operation 8
