The Future: During the past 20+ years, the trends indicated by ever faster networks, distributed systems, and multi-processor computer architectures (even at the desktop level) clearly show that parallelism is the future of computing.. In this same time period, there has been a greater than 500,000x increase in supercomputer performance, with no end currently in sight.

Introduction to Parallel Computing

In computing, the performance of a computer system refers to the amount of useful work it accomplishes (i.e. instructions it executes). Generally, outside of specific contexts, the performance of a computer is essentially estimated in terms of efficiency, effectiveness and speed; when it comes to computers with high performance however, one or more of the following factors may be involved:

This has to be brought in-line with the manuscript: I'd like to place remarks (e.g. "This feature is implemented in method XXX in SNIPE") all over the manuscript.
